BDS | Bulk Diesel Filter Skid Series

- Flow: ranging from 70-280 gpm
- Fuel filter(s) and water separator assembly for high flow, single-pass fuel delivery and dispensing applications, or for high flow fuel storage tank cleaning systems
- Allows the user to cost effectively meet or exceed the latest particulate and water content standards for stored and dispensed diesel fuel

HY-TRAX® | Telematics Fluid Sampling System

- Patent-pending technology provides remote visibility to manage fluid conditions of critical systems
- Fluid particle counts, temperature and water saturation (optional) are then displayed online. Alert texts/emails are sent once user-defined thresholds have been met.
- Micro Variable Speed Pump/Motor self-adjusts to achieve accurate fluid condition measurements

BDFP | Plate Mounted Bulk Diesel Filter System

- A simple, turn-key fuel filtration solution ideal for fuel transfer and kidney-loop applications
- Incorporates new fuel filtration products to improve performance and capacity while reducing overall cost and weight
- Available in 14 or 25 gpm configurations with choice of electric motor or air operated pump
