

April 2025

### **Discontinuation of ET-100 Series**

Effective immediately, we are discontinuing the ET-100 series of hydraulic testing units. The discontinuation of these testers is primarily due to the obsolescence of components needed for the electronic circuitry within the unit. For the immediate future, we will continue with the service and calibration of the ET-100 Testers however please be aware that we may not be able to repair the units based on the componentry that may be needed.

### **Replacement offered**

HMG Series – The HMG is a hand-held measuring unit for data logging. It was developed for all values measured in relation with hydraulic systems, such as pressure, temperature, flow rate and position.

The HMG2500 and HMG4000 are replacement hydraulic testing units that will provide the user with access to test points and sensors currently installed in the hydraulic system. The HMG Series will be able to measure system temperature, pressure up to 10,000psi and flow rates up to 155gpm like the ET-100's. Data from the sensors can be immediately viewed on the HMG's screen as well as saved for downloading at a later time.

The information on our HMG Series and sensor options can be found on the Schroeder Industries website - [Handheld Data Recorders On Schroeder Industries](#)

For questions and additional information, please contact a member of the Filter Systems Team

Sincerely

Kristine Mikulan
