Pound-for-Pound, the Most Effective Fluid Service Unit in Town

The filtration experts at Schroeder Industries have released a premier new portable offline filtration system.

Leetsdale, PA. (November 5, 2020) – Schroeder Industries, a recognized leader in fluid filtration and condition monitoring, introduces the HFS-15, Handy Filter System, as *the* premier portable offline filtration system.

The HFS-15 offers owners and operators of hydraulic fluid powered and oil-lubricated machines exceptional-degrees of filtration efficiency and capacity. Designed in a compact, mobile package, and weighing only 30 pounds, the HFS-15 includes everything you need on the path to clean oil.

The HFS-15 provides an effective, portable solution for filling and flushing hydraulic systems, the temporary filtration of solid and free water contaminants from bulk oil storage, and the reclamation of serviceable, mineral-based fluids that would have otherwise incurred high disposal costs.

The benefits of the HFS-15, Handy Filter System, undoubtedly improve the service life of the components and systems, fluid service life, and machine availability, while reducing the overall total cost of ownership (TCO) of the machines it services.

About Schroeder Industries

As an ISO 9001:2015 certified company, Schroeder Industries has been designing, manufacturing, and marketing a complete range of Advanced Fluid Conditioning Solutions® for over 70 years. With products proudly manufactured in the United States, we DELIVER the fluid power industry's most technically advanced and reliable liquid filtration products. Today our customers include a majority, if not all, of the world's largest OEM and MRO operations.
