

THE FUTURE OF FILTRATION TECHNOLOGY

IS HERE

Imagine technology so advanced it maintains a history of your equipment's hydraulic and lubrication fluids to ensure the maximum return is achieved. Schroeder's new state-of-the-art **Asset Management Filtration Station (AMFS)** pays off in real dollars with less down time and lower maintenance costs.

Reliability or maintenance teams with fluid care responsibility can now condition, measure and track fluid maintenance and quality, in one step. No lost records. No questions related to accomplished PM tasks. No wasted time addressing potential fluid quality issues. The AMFS provides ultra-efficient, cost-effective filtering with complete fluid quality monitoring, tracking and reporting capability. Maintenance records, data logging and data analysis are now available in one unit. All data is presented by the measured asset.
