

DATA SHEET

HDP 240 BC | Diesel PreCare

Features:

- The new pre-filter HDP 240 BC expands the Schroeder product portfolio in the field of on-board diesel fuel filtration.
- While formerly a flow volume from 90 up to 476 gph has been covered, this new product complements the range in the lower area to 63 gph.
- Dual function: Diesel filtration and water separation through the two-stage element design.
- High performance stability ensures efficient water separation on clean side over the entire service life.
- Easy element service due to fast, no-mess bowl and element design.
- Flexible use in application due to variety of inlet/outlet porting options.

Options:

- Adaptable diesel fuel heating
- Water level sensor
- Adaptable priming pump (manual):
 - Operation optionally from left, right or front
- Transparent or black bowl
- Connections:
 - Inlet: from left, right or top
 - Outlet: to left, right or top
